I like this proposal if the end result is cheaper electricity for Southern New Zealanders. It is a lot colder down here and we have the oldest housing stock in New Zealand. Environment Southland have outlined the clean air plan which will affect many houses in Southland. As a result of the clean air plan some Southland homes will no longer be able to use their fires and will rely on electricity to heat their homes. A reduction in cost would be a warm welcome.

Kind regards
Belinda Ballantine
