# Metering and registry records

Ron Beatty Principal Advisor

COMPETITION • RELIABILITY • EFFICIENCY

# WHAT THE REGISTRY DOES

- The registry is a critical enabler of the competitive electricity market. It enables
  - single version of the “truth”
  - transparency of information
  - customer choice of retailer
  - Invoicing, consumer, network, clearing manager
  - Reports and reporting activities
  - compliance monitoring
  - Switching
    - trader identifiers (customer switching)
    - distributor/network owner identifiers (distributor switching/ICP transfer)
    - meter provider identifiers (MEP switching)

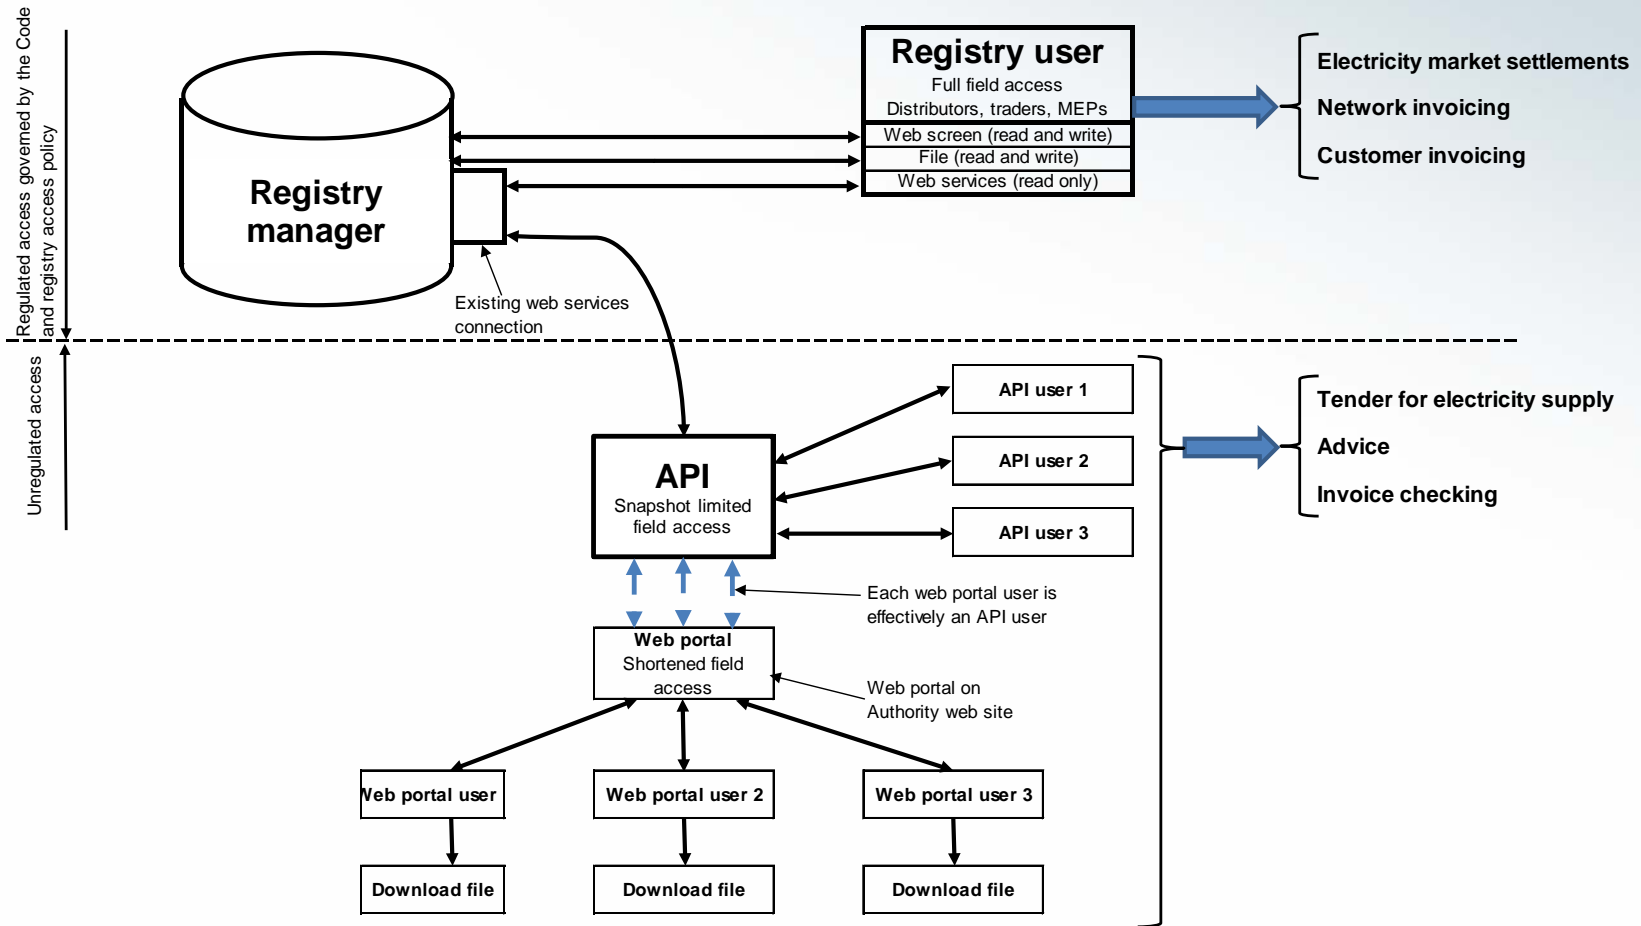

# REGISTRY FUNCTIONS

- Stores and makes available information
  - Is not a work flow tool, records are updated after an event
  - Records time sliced “ownership” of ICP identifiers by participants
  - Records time sliced attributes relevant to ICP identifiers
  - Records static information required by the industry
  - Sends acknowledgements, notifications, and alerts when a change is carried out to an ICP identifier
  - Provides secure data hub for participants to exchange information
  - ICP outage management

# ACCESS TO THE REGISTRY

- Participants must apply to the Authority for access
- Authority usually only grants full access to those parties that require it for Code purposes
  - registry access policy contains the Authority's terms and conditions at <http://www.ea.govt.nz/dmsdocument/16031>
  - participants must comply with the terms and conditions specified by the Authority (clause 11.28(2A))
- Access is by any one of the following – user choice
  - web browser screen
  - SFTP
  - web services

# REGISTRY ACCESS

- M2M connect via public API <https://emi.portal.azure-api.net/>
- M2C connect via <http://www.ea.govt.nz/consumers/your-power-data-in-your-hands/my-meter/>

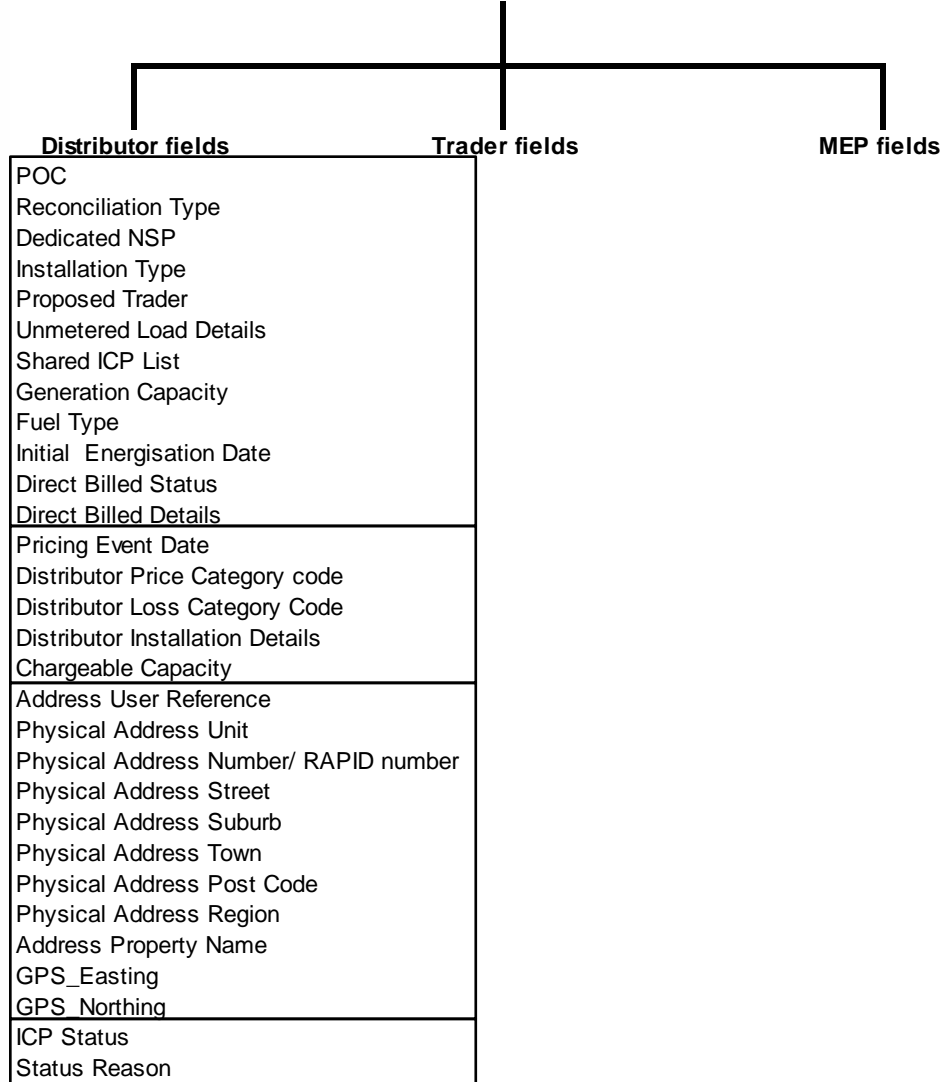

# ACCURACY OF INFORMATION

- Time frames give in the Code to provide information to the registry are maximums, and not targets
- The registry has strict Code obligations for accuracy and time periods to provide and update records
  - a participant does not breach the Code just because the participant does something relying on inaccurate records in the registry (clauses 10.4 and 11.32)
  - a participant must take all practicable steps to ensure that information provided to the registry is complete and accurate, not misleading or deceptive, and not likely to mislead or deceive
  - information provided to the registry is found to be in inaccurate must be corrected as soon as practicable (clause 11.2)

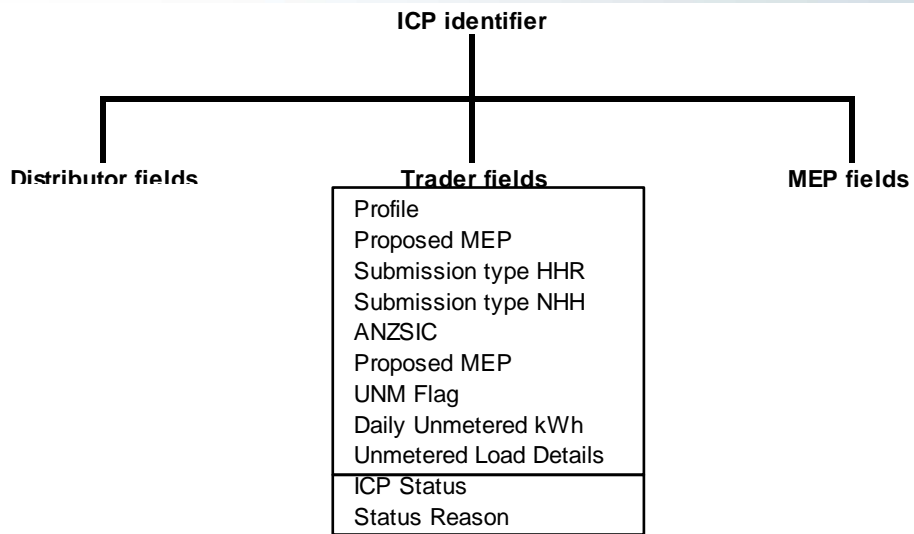

# REGISTRY METERING RECORDS

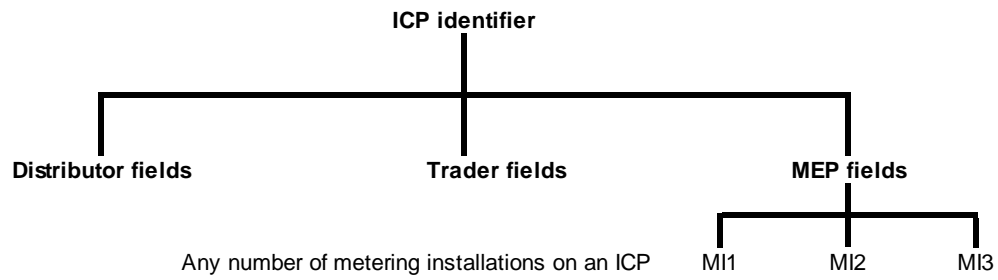

- A metering installation is an assembly of metering components that measures electricity conveyed (directional)
- All active MI must have current certification by an ATH
- The registry contains records of MIs and these are termed “registry metering records”

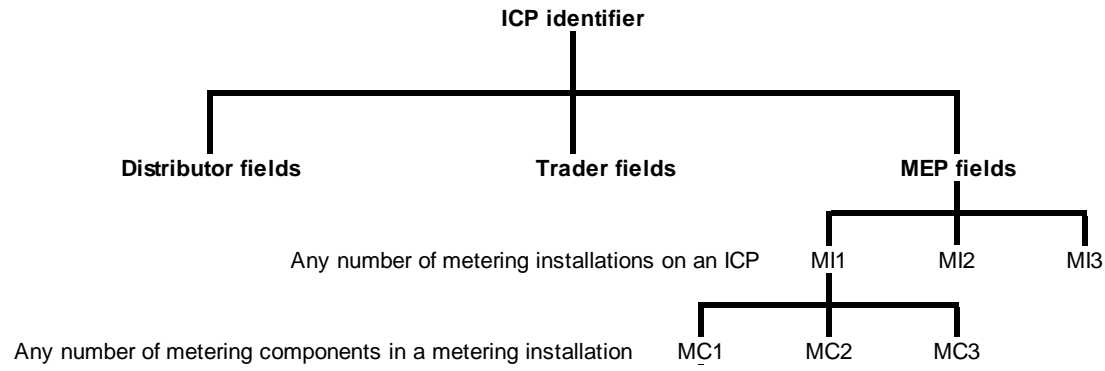

# ICP identifier

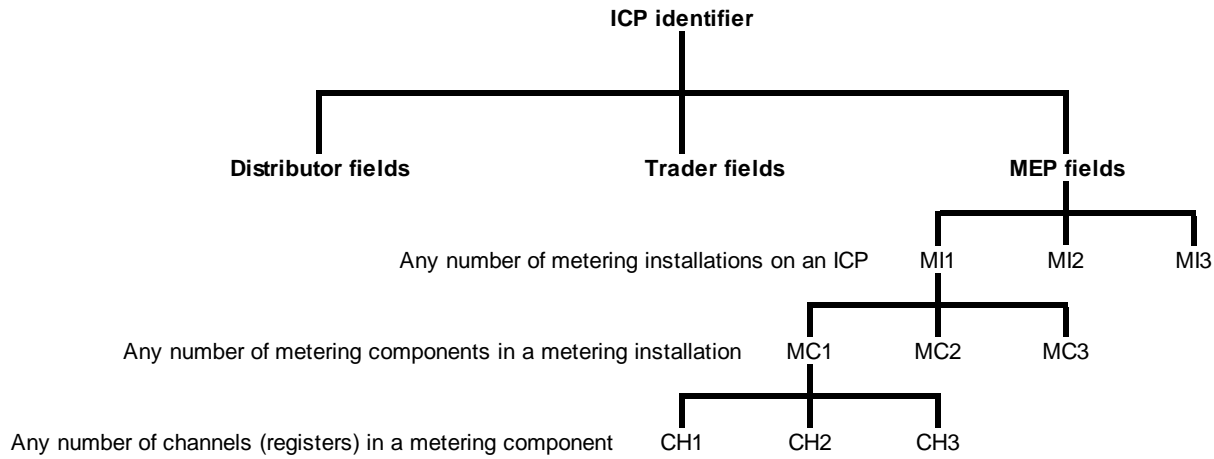

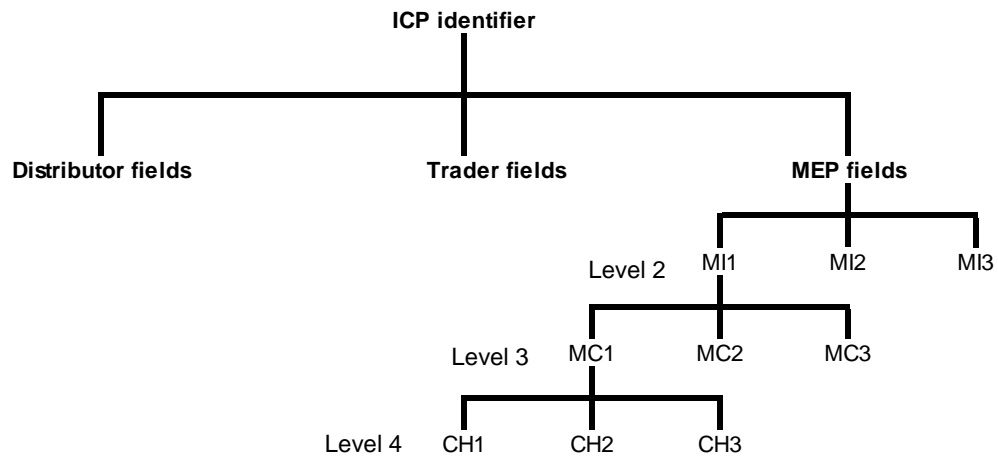

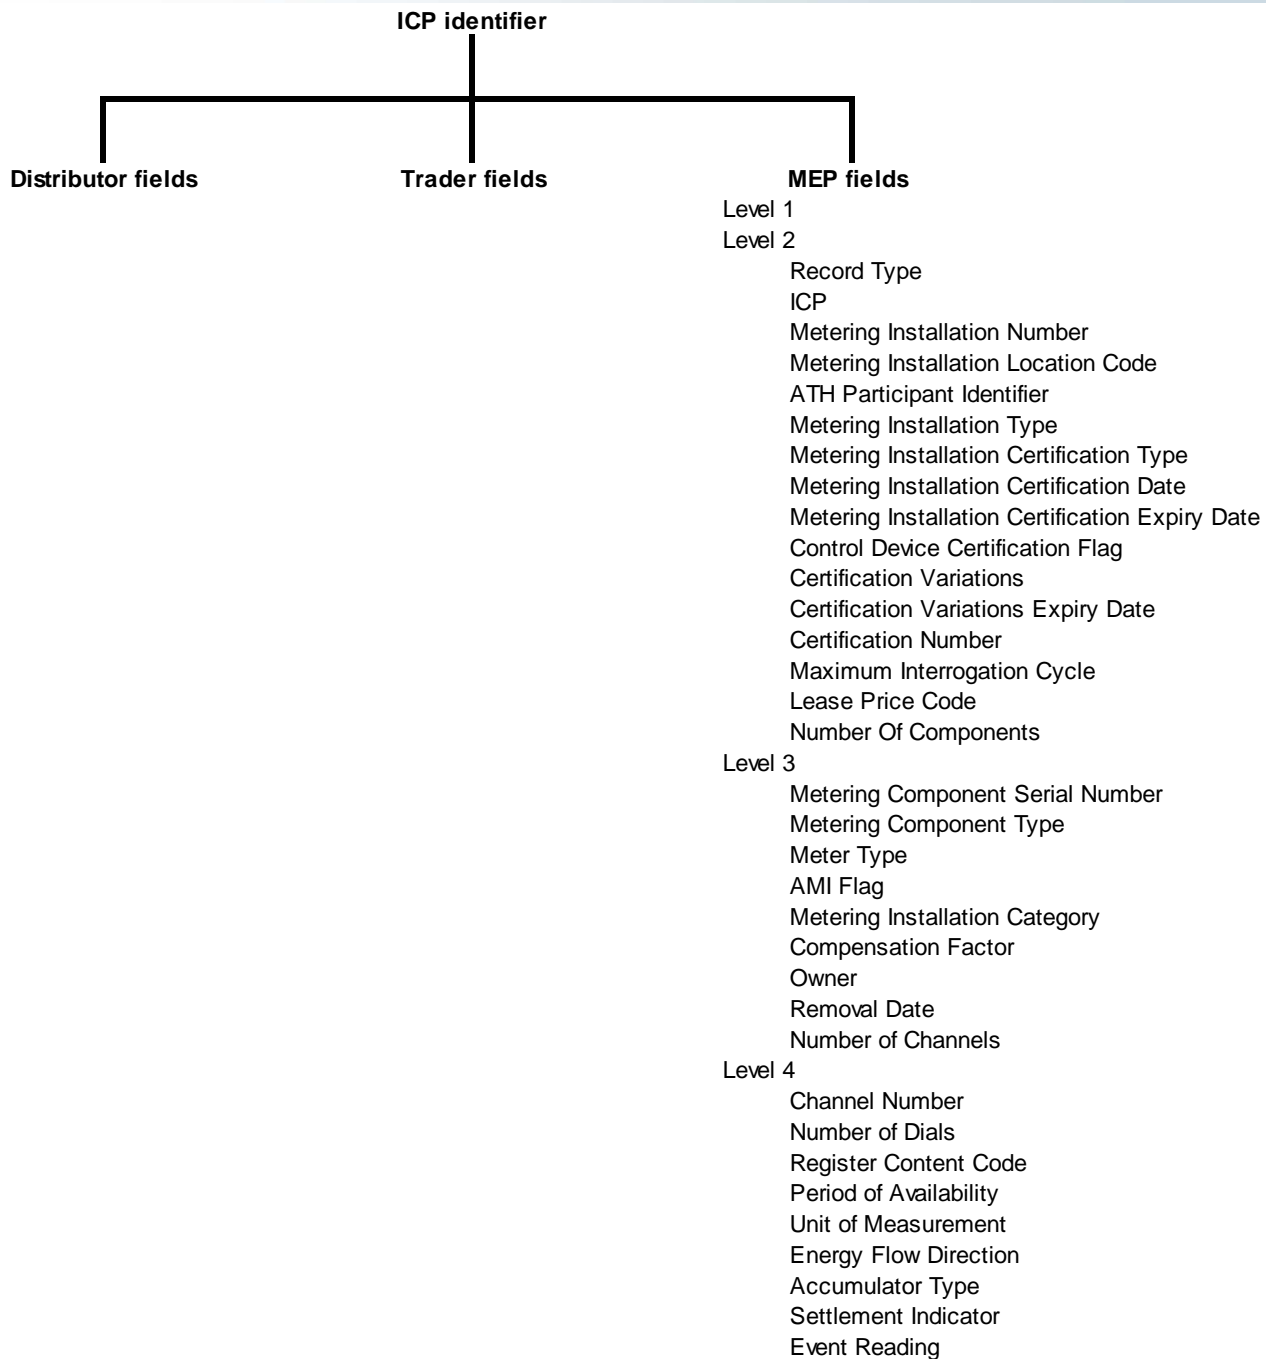

# REGISTER CONTENT CODES (RCC)

- A code that identifies the type of information being recorded by the channel e.g. winter, triple saver peak etc
- Identifies if electricity measured by the register is subject to
  - load control at any time by the distributor
  - time control by the distributor or LCD
- Selected from a list in the registry. Refer to SD-020 of the registry functional specification

# SD-020

## REGISTRY FUNCTIONAL SPECIFICATION

Code	Description
AD	kVA demand - KVA MDI
AH	kVAh - cumulative KVA register
CN	Controlled - all load on the register is subject to control via LineCo
D	Day - daytime only
DC	Day register for a fully controlled meter
DOP	Triple Saver Off Peak (1100-1700 2100-2300)
DPK	Triple Saver Peak (0700-1100 1700-2100)
DWD	Day of Week Days (7:00am - 9:00pm)
EG	Embedded Generation
IN	Inclusive - load on the register is a combination of controlled and uncontrolled loads
KD	kW demand - KW MDI
N	Night - night-time only
NC	Night register for a fully controlled meter
NWD	Night of week Days (9:00pm - 7:00am)

# ALTERNATE SD-020

Code	Description	Period register is active for
<b>Single register tariffs</b>		
AD	kVA demand - KVA MDI	Anytime
AH	kVAh - cumulative KVA register	Anytime
CN	Controlled - all load on the register is subject to control via a load control device	Refer to network owners pricing schedule
DC	Day register for a fully controlled single register meter	
EG	Embedded Generation	Anytime
IN	Inclusive - load on the register is a combination of controlled and uncontrolled loads	Refer to network owners pricing schedule
KD	kW demand - KW MDI	Anytime
RH	kVArh - reactive meter register	Anytime
NC	Night register for a fully controlled single register meter	Refer to network owners pricing schedule
UN	Uncontrolled - no load on the register is subject to control via a load control device	Anytime
<b>2 register tariffs</b>		
D	Day - daytime only for a two register day/night meter	Refer to network owners pricing schedule
N	Night - night-time only for a two register day/night meter	Balance of time when D not active
S	Summer - records consumption only during summer	Refer to network owners pricing

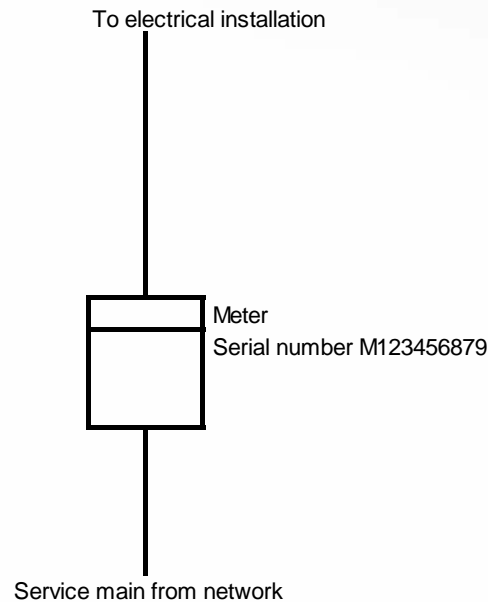

# PERIOD OF AVAILABILITY (POA)

- Identifies the minimum time period a register is active for in a day
- Determined by distributors in their pricing plans
- Will be a value between 1 and 24 – (24 indicates there is no control applied to the electricity measured by the register)
- Currently is no default period of availability when a distributor does not define the minimum period of availability

# RCC + POA

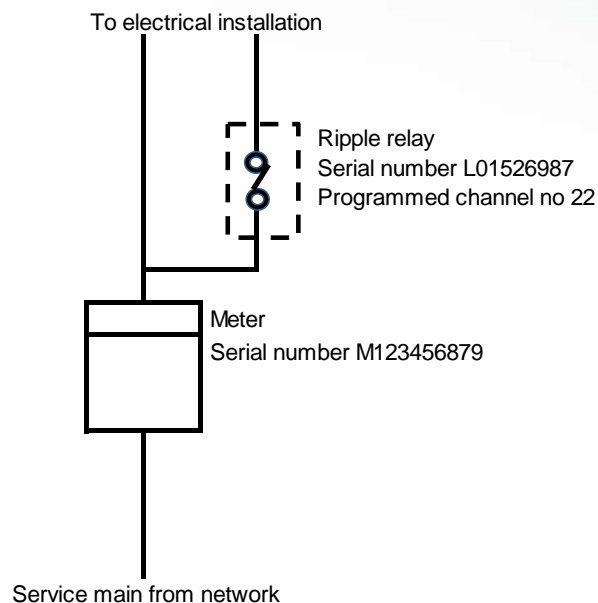

- UN24 = uncontrolled channel, supply available 24 hours per day
- CN17 = controlled by distributor, supply available for a minimum of 17 hours per day
  
- Exercise, what do the following mean
  - IN24 =
  - IN17 =
  - CN8 =
  - NC8 =
  - D14 =
  - N? =

# RCC AND POA ON REGISTRY

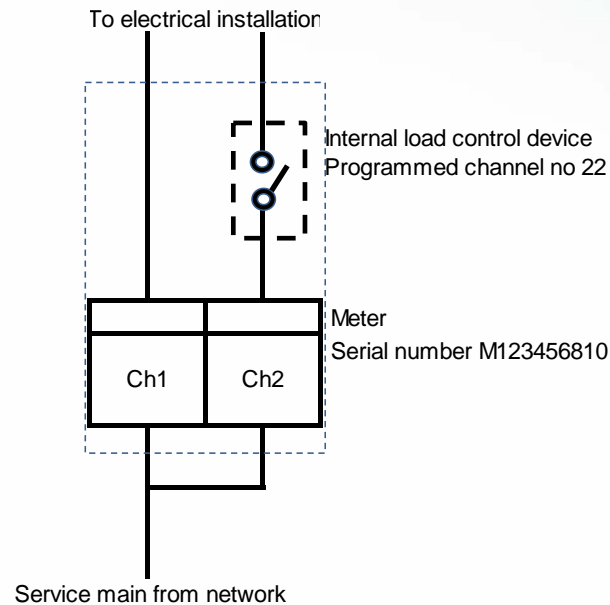

- RCC = UN
- POA = 24
- On registry we should see
  - M1 + UN + 24

# RCC AND POA ON REGISTRY

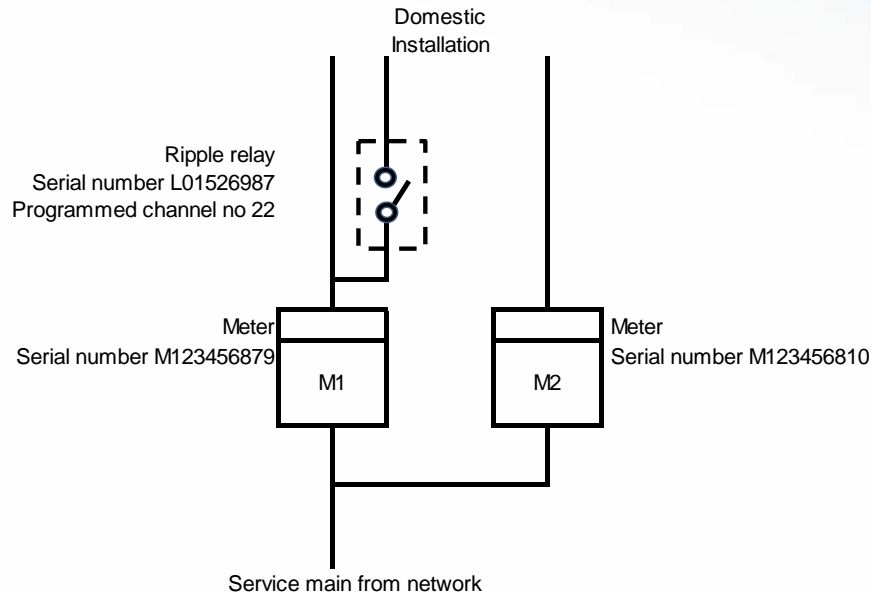

- RCC = IN
- POA = 19
- On registry we should see
  - M1 + IN + 19
  - LCD (optional if not certified)

# RCC AND POA ON REGISTRY

- RCC Ch1 = UN
- POA Ch1 = 24
- RCC Ch2 = CN
- POA Ch2 = 17
- On registry we should see
  - M1 + UN + 24
  - + CN + 17
  - LCD (optional if not certified)

# RCC AND POA ON REGISTRY

- RCC M1 = IN
- POA M1 = 17
- RCC M2 = UN
- POA M2 = 24
- On registry we should see
  - M1 + IN + 17
  - M2 + UN + 24
  - LCD (optional if not certified)
